

LGT8F328P VS ATmega328 – 02: PINOUT [封装, 引脚]

LGT8F328P	ATmega48/88/168/328
	

LGT8F328P-QFP32L is deeply compatible with ATmega328-QFP32L.
You can replace ATmega328 without any change of your print circuit board.
LGT8F328P is powered by PIN4/5, which is compatible with ATmega328's PIN4/5.
LGT8F328P change all other power pin to I/O pin. DO NOT USE these I/O if they are tied to GND/VCC on your board.
LGT8F328P also change ADC7/AREF to combo with GPIO function, which is not supported in ATmega328A.
